WSL - Windows Subsystem For Linux

<https://docs.langflow.org/>

Install Langflow

Select Python package

Pip install llama-cpp-python

Using local LLM models: Quantized or Regular models?

Windows Command Prompt: `python -m venv windowsenvlangflow`

windowsenvlangflow\Scripts\activate

pip install uv

uv pip install langflow

uv run langflow run

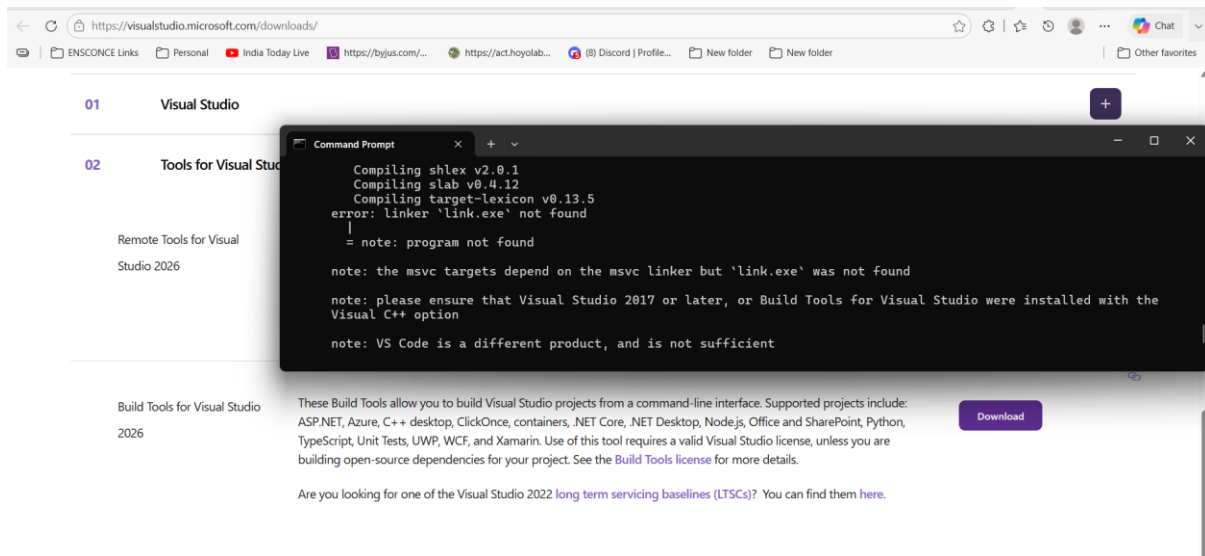

Next time onwards – do only.

```
C:\Users\Srividya>windowsenvlangflow\Scripts\activate
(windowse
```

`del "C:\Users\Srividya\AppData\Local\langflow_windowversion\secret_key"`

Installation Error: for Visual Studio Build tools

[Visual Studio Downloads for Windows](#)

DESKTOP DEVELOPMENT WITH C++ OPTION

set

LANGFLOW_CONFIG_DIR=C:/Users/Srividya/AppData/Local/langflow_windowversion
